COMMENTING CODE

BY SANJAY AND ARVIND SESHAN

LESSON OBJECTIVES

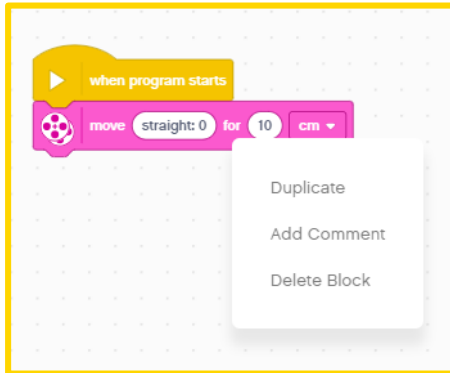

- Learn how to comment code
- Learn the importance of commenting code
- Learn what makes useful comments

WHY BOTHER WITH COMMENTS?

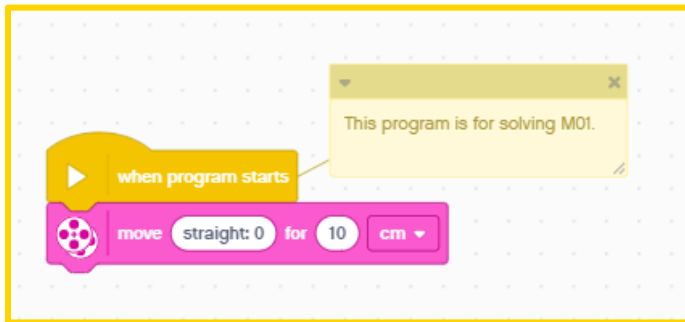

- Comments in code help the author of the code remember what they were trying to accomplish.
- You can use them to record the goals or pseudocode for the code.
- It makes it easier to debug
- You could use it to take notes on values
- More importantly, comments allow someone other than the author of the code to understand the program.
- Get into the habit of adding comments to your code

ADDING COMMENTS

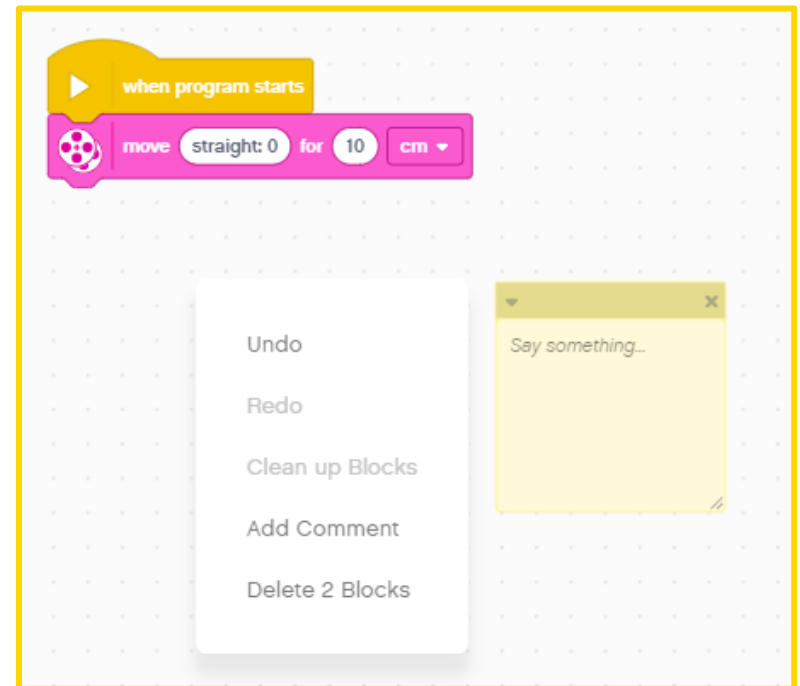

- Right click on any block to add a Comment

- Type your comments and resize and move the box as needed

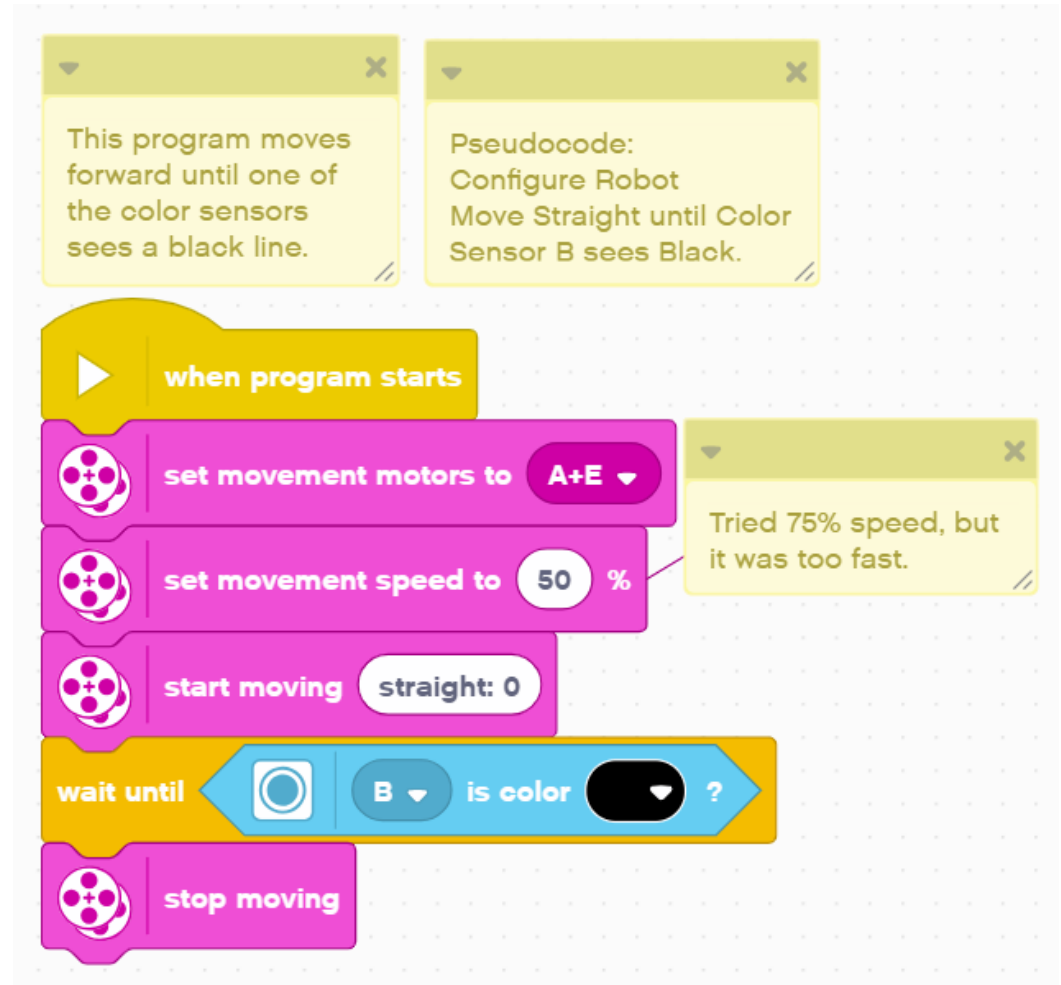

- You can also right click anywhere on the Programming Canvas to create a Comment box

WHAT ARE USEFUL COMMENTS?

- Make comments count: Comments should not repeat the contents of the block.
- Comments can be used to summarize the code/document the pseudocode you wrote
- Comments can be used to document values you are trying out in the code
- Note: In our lessons, we do not use comment blocks only because it makes it harder for our collaborators to translate. Instead, we used text boxes in PowerPoint.
